"I am really, really enjoying the crutches and I have to say it was the best money I have spent in my life".

JIM MARYE - RETIRED U.S.A. ARMY COLONEL

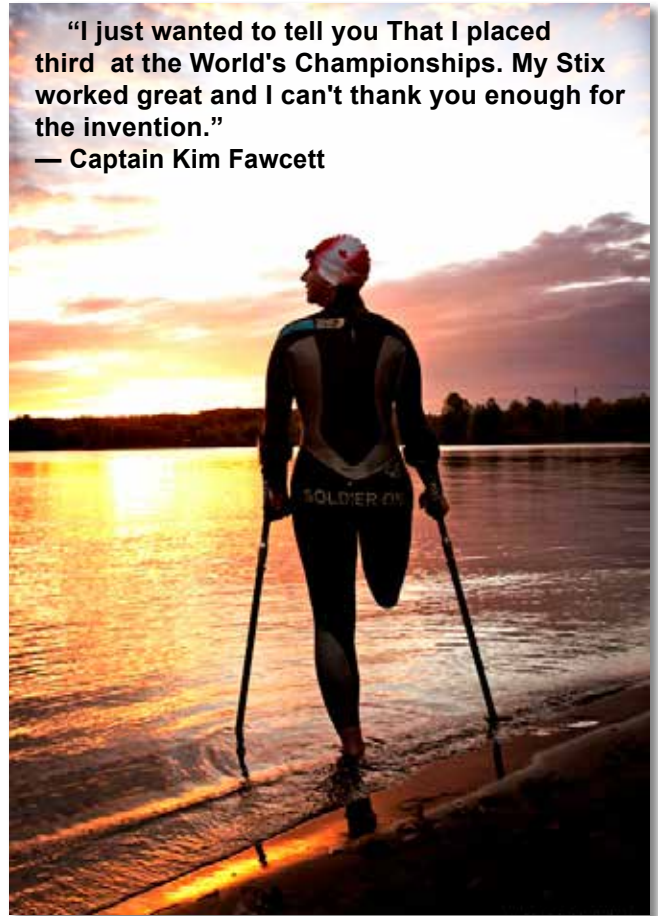

Designed to go far

for a Variety of Mobility Challenged Individuals

“SideStix have improved my life! They take the pain out of crutching and give me a chance to pursue anything and everything that makes me happy.”
— Nico Calabria, Concord, MA

“I just wanted to tell you That I placed third at the World’s Championships. My Stix worked great and I can’t thank you enough for the invention.”
— Captain Kim Fawcett

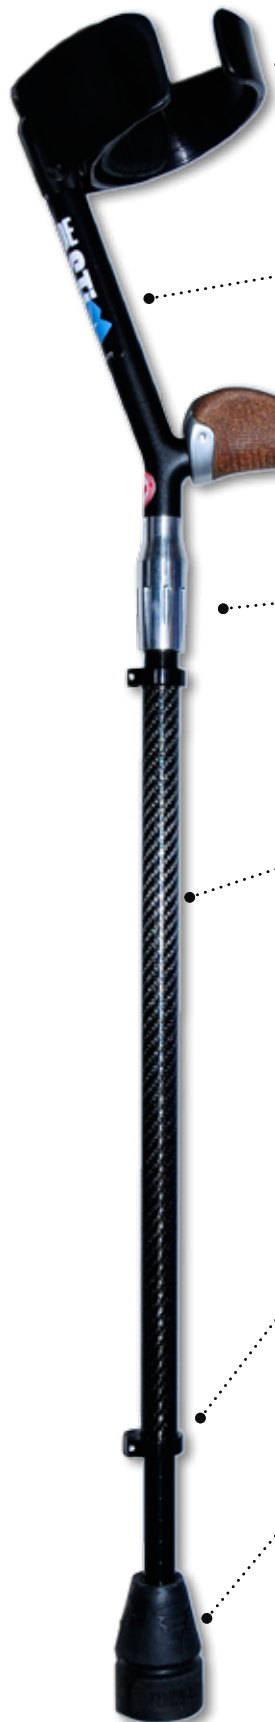

“I am marveling over the joint of the SideStix foot. I am enjoying allowing my shoulder joint to rotate to it’s favored position”
—Dr. Jon Arnow, Incomplete Paraplegic

“There’s No Stopping Me Now!”
— Rona

Helping to Provide a More Active and Healthy Life

• Customizable Cuffs

Three styles to choose from depending on your needs. The cuffs are made from high quality Nylon and can be easily resized. Durable leather cuff pads prevent chaffing.

• Ergonomically Designed

The only forearm crutch designed by an occupational therapist and an engineer, with an ergonomically designed forearm assembly that reduces secondary injuries by keeping wrist and forearm in a neutral position. This improves the ability to walk longer with greater comfort.

• Ergonomic BioKork Handgrip

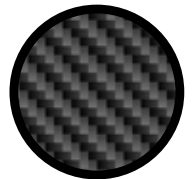

Provides the ultimate in comfort. Made from cork that is anti-bacterial, hypo allergenic and super grippy. SideStix grip covers are also available.

• Damper Shock Absorbing System

The first and only forearm crutch to feature a revolutionary damping shock absorber system. The shock absorbing system reduces joint compression and provides energy return, as demonstrated by Vancouver's UBC/ICORD facility. Reduced fatigue and pain is a direct result.

• Carbon Fibre Lower Tubes

The lower tubes are made from carbon fibre which is very durable and lightweight. The carbon fibre keeps the overall weight low, reducing energy use and improving the efficiency of ambulation.

• Customized to Fit

Each pair of SideStix crutches is custom designed to fit an individual's specific measurements and mobility challenge. Height can also be further adjusted on the lower tubes by five inches and the forearm cuffs can be easily resized. Correctly fitting crutches are more comfortable, provide better stability and reduce secondary injuries.

• Interchangeable Tips and Attachments

Standard Tornado Tips provide excellent articulation and grip on most surfaces thus improving stability. SideStix also have an assortment of interchangeable outdoor attachments which offer accessibility to a variety of terrain previously unavailable to crutch users.

Sandshoe Attachment

Snowshoe Attachment

Spindle Ice Pick

Free-Rotating Tips

Each pair of SideStix Forearm Crutches comes with nylon cuffs, leather cuff pads, Ergon Biokork grips, Tornado tips, SideStix tool, Allen Key and SideStix bag. Attachments and Accessories can be purchased separately.

Founders: Sarah Doherty, Occupational Therapist & Amputee
Kerith Perreur-Lloyd, Structural Technologist

THE STORY OF SIDESTIX

“My life changed drastically when I was hit by a drunk-driver and lost my leg. Prior to being an amputee, I was active in sports and the outdoors. After my accident, retaining the freedom of a healthy and active lifestyle became a life-goal.

Walking on conventional crutches inevitably led to secondary injuries, so in order to prevent joint damage and maximize comfort, my partner Kerith Perreur-Lloyd and I, designed and manufactured the best forearm crutch on the market.”
